Unfortunately, in the issue number 1/2006 Metrology and Measurement Systems in the article: Zygmunt L. Warsza “Two-parameter measurements and signal conditioning in double – current supply four – terminal resistance circuits” has been error in contents of the Fig. 2. The correct contents of this figure is given below.

Fig. 1. Principle of two variable $x_1$, $x_2$ measurements by the antisymmetric double current bridge of $R_1 = R_{30}$, $R_{20} = R_{20}$.
